

## AWARDED 3 CONSECUTIVE YEARS

Friction Materials and Standards Institute

## Top Contributing Member for 2020

Cerritos California based brake parts manufacturer **DFC (Dynamic Friction Company)** announced that it has once again been honored by FMSI (Friction Materials and Standards Institute) annual 2020 award for New Assignments and Applications. This marks the fourth consecutive year DFC has been recognized for its contribution to the brake industry by FMSI. DFC not only provided the industry with the most new vehicle friction applications, but also accomplished surpassing the previous year's submissions from 200 to 252 new vehicle applications.

FMSI has a 70 year tradition of providing the automotive aftermarket industry with the most recognized standardization of original equipment part numbers utilized virtually universally by brake component manufacturers and suppliers. FMSI works closely with manufacturers around the globe to bring to the aftermarket the most reliable and current brake part number data to every sector of the distribution and installer network. It relies heavily on progressive and innovative manufactures like DFC in order to achieve that goal.

"Our goal is to not only provide the aftermarket community with the finest quality in brake components, but also the most complete and updated brake program with first-to-market competitive advantage," said R & D manager Jesus Villalobos
